

PATENTED BREAKTHROUGH TECHNOLOGY

Advanced Air Filtration Technology Has Customers Returning to Restaurants

Many are anxious to get back to their pre-pandemic routines, including indoor dining at favorite restaurants. Middleby, a leading supporter of the restaurant industry, is proud to introduce Bluezone By Middleby which will make indoor dining safe again with advanced, patented air filtration technology.

WHAT IS BLUEZONE BY MIDDLEBY?

Bluezone By Middleby is a breakthrough innovation with advanced air filtration technology ensuring restaurant safety. Independent studies show this technology is 99.9995% effective in eliminating viruses and other airborne contaminants.

WHAT MAKES THIS TECHNOLOGY DIFFERENT FROM OTHERS ON THE MARKET?

Bluezone By Middleby technology can be in operation 24/7 cleaning the air, regardless of restaurant capacity. Filters do not have to be changed for it to be effective, since the patented innovation is filterless. The unit can be placed in the ceiling or ordered in a piece of furniture to discreetly fit into a restaurant décor.

WHY IS AIR PURIFICATION IN RESTAURANTS IMPORTANT?

Many viruses and contaminants are airborne. Tables can be wiped and hands washed but that cannot lessen airborne particles which can be suspended in the air for many hours.

WHO IS MIDDLEBY?

Middleby is a world leader in innovative equipment solutions for the restaurant industry.
